The JVA Z13

The JVA Z13, which belongs to the same stable as the rest of the JVA range, enjoys the same high quality manufacturing and safety standards as the Z14, Z18 and Z28.

This unit has been especially manufactured to meet customer demand for a no-frills, economical unit for small, domestic, commercial and industrial sites.

In keeping with standard security electric fence energisers on the market, the Z13 does not have an LCD display. Other slight differences are tabulated below. For all other requisite information on the Z13 consult your Z14 Manual.

Feature	Z14	Z13	Explanation
Output power	4 joules	2.8 joules	This power level is sufficient for a small property.
LCD display	Yes	No	Very convenient to have but not a necessity for the normal operation of an electric fence.
Bi-polar mode	Yes	No	The components to monitor a bi-polar fence have been excluded from this econo-model.
Keypad & programming	Yes	Yes	Programming settings not visible on the Z13 energiser.
Additional relay outputs	Optional add-on	No	Unlike the Z14, the Z13 is limited to 3 relay outlets: siren, light and gate.
